Abstract

Status of women in the society is an indicator of its civilization. Empowerment is the process of increasing the assets and capabilities of individuals or groups to make purposive choices and to transform those choices into desired actions and outcomes (World Bank, 2002). Empowered people have freedom of choice and action. This in turn enables them to better influence the course of their lives and the decisions which affect them. Inherently, women constitute a major segment in the economy and an overall development for harmonious progress of a country would be likely only when women are treated as equal partners in progress with men. In most of the economies, it is evident from various studies that, women continue to experience vulnerability owing to gender inequality and their socio and economic status. It becomes an imperative for any nation to focus its efforts in empowerment of women as it is necessary to make women a part of the mainstream of economic development. The rationale behind a Self-Help Groups (SHGs) is that the issues of women and children are better understood and better managed by women themselves. Women are considered to be the best knowledge givers on personal and domestic hygiene, sanitation and other facilities. Microfinance has emerged as a tool for empowerment has enabled human development. Financial inclusiveness by way of participation and utilization of microfinance enables the poor, especially the women from the poor households, to collectively identify and analyses the problems they face in the perspective of their social and economic environment.

As per the Telangana State Statistical Abstract (January,2022), 4,39,886 SHGs have been formed to cater to a population of 47,57,468 poorest of poor rural women. The objective of the study is to examine the efficacy of microfinance on the women SHGs in their economic, social and political empowerment. The study also aims at examining the microfinance enabled entrepreneurial empowerment. A convenience sample of 200 SHG members is chosen out of which 100 respondents are chosen from 10 Self-help groups from Rusthapur village of Yadadri district under the rural component and 100 respondents from 10 SHGs from LB Nagar of Ranga Reddy district under the urban segment. The data is collected through a structured questionnaire and data inputs are taken through interview and focused group discussions with the SHG members. The data is analysed using excel

INTRODUCTION

“Microfinance recognizes that poor people are remarkable reservoirs of energy and knowledge, posing an untapped opportunity to create markets, bring people in from the margins and give them the tools with which to help themselves.” - Kofi Annan, Ex UN Secretary General

To hasten the socio-economic progress of any society, inclusion of women in the development process is essential as it not only accelerates the progress but also improves their standard of living. The ninth

five-year plan has laid the foundation for empowerment of women and it has been viewed as one of the primary goals of governance which reflected in the national Common Minimum Programme (NCMP)¹. Government also initiated Sector specific programmes with an objective to empower women socially, economically, politically and legally and thus making them self-reliant in many ways.

The International Labor Organization (ILO) defines Microfinance as “an economic development approach that involves providing financial services through institutions to low-income clients.” The microfinance customers represent that segment of the population which is not financially included and hence cannot reach out to financial institutions. Microfinance has emerged as an innovative financial service tool which lends small loans and different financial services to deprived and poverty ridden low-income households and as an economic tool aid in helping the poor to come out of the vicious circle of poverty and improve their overall quality of life (RBI) ². Micro finance in India has turned into reality, hitherto, the implementation of national policies targeted at poverty reduction, women empowerment by lending a helping hand to the vulnerable sections of the society, particularly the women. Indian microfinance sector has experienced a positive growth over past twenty years in terms of increase in the number of microfinance institutions as well as the amount of credit availability to the small borrowers. Microfinance is disbursed through various formal channels like commercial banks, Regional Rural Banks (RRBs), facilitating lending through business correspondents (BCs) and SHGs, cooperative banks, non-banking financial companies (NBFCs), and registered non-banking finance companies to undertake this form of lending.

Women Empowerment

Empowerment is the process of building assets and individual capabilities or skills to make conscious choices and to convert those choices into result-oriented actions (World Bank, 2002)³. Empowered people experience freedom of choice and action. This in turn facilitates them to influence the course of their lives and the decisions which affect them. Empowerment can also intend to give rise to a social environment in which one can take decisions and make choice either individually or collectively for social transformation⁴

Women are a part of almost 50% of the global population out of which 2/3rd of world's adult uneducated are women. According to Food and Agriculture Organisation of the United Nations, the most underprivileged section of society is the women; they are the ‘silent majority’ of the world's poor. Despite concerted efforts to reduce gender inequality, women population continue to be caught in myriad problems: like socio economic disparities and under representation. Studies have shown that rural women help in producing up to 80 per cent of food in developing countries, yet they are entitled to only a fraction of farm land, and access to just 10 per cent of credit and five per cent of extension advice (Agrawal, 2003)⁵. In almost all the communities, women showcase less power than men, less control over resources and receive lower wages for their work. They remain as an imperceptible work force even today. undeniably, all these factors affect women's ability to open up, progress, and excel. With regard to their multitude of responsibilities, it is required to empower women socially, economically, politically to enable them to create a mark of their own with confidence, besides entrepreneurial empowerment in particular can transform women and prepare them to bring situations under their ambit and improve their standard of living. Empowerment of women is critical not only for their own welfare but also for the development of the country.

(Mehmud et al,2012)⁶ in their study on measurement of Women's empowerment in Bangladesh, made an observation which is very relevant in the present context. According to them “Issues to consider

while measuring women empowerment: the empowerment process (social, economic, political, psychological) is multidimensional, context specific and not directly observable, which can only be approximated using proxies/indicators". (Rooyen et al ,2012)⁷ in the context of women empowerment concluded that there is a mixed and inconclusive evidence suggesting the relationship between women empowerment and microfinance. Microfinance has come to be evolved as an instrument of women empowerment particularly for the rural women, like a light at the end of the tunnel, gave scope for poor women to empower not only themselves but also their families over the last two decades in India.

Review of Literature

(Ritu Mehla 2017). The study focuses on the concept of empowerment and status of women in India describing the important constitutional, legal and other provisions. The study covers the status of women during different historical periods such as at earlier time as on today specific gender was getting equal status. Women had faced difficulties during post-Vedic and epic ages. Many a time they were treated as Goddesses and at other times merely as a slave. The status of women has changed slowly and gradually from twentieth century. As a result of fight of the constitutional makers and national leaders for equal status of women with men women occupied the respectable positions in all walks of the fields. Yet, they have not absolutely freed some discrimination and harassment of the society. Absolute numbers of women have not been able to establish their potentialities.

(Preeti Sharma and Shashi Kanta Varma 2008). The paper reveals how women in India have been ignored after being significant in the economic development of the country. Women has to be empowered by enhancing their awareness, knowledge, efficiency in use of technology etc., facilitating overall development of the society. The SHGs concept is proving to be an effective instrument in women empowerment. Women as part of SHGs use the microcredit and undertake some entrepreneurial activity. Entrepreneurship and income generating activities are a viable solution for empowering women.

(Sarah Kamala and Uma Jyothi 2018). The study focusses on the biggest challenge of poverty, especially the women and how SHGs have become instrumental in eradicating poverty and rural development. SHGs have been vital in creating self-employment opportunities and enhancing the income levels and standard of living of the women through microfinance. The study was carried in the regions of Telangana and Andhra Pradesh, India and found that through SHGs more than 50% of the SHGs were strong in individual income generating activities but were weak in entrepreneurial and group income generating activities. Most of the SHG members are from the farming/ agriculture background and the entrepreneurial activities in agriculture and allied sectors are not organised in the area of study.

(Supriya Garikipati, Susan Johnson, Isabelle Guérin and Ariane Szafarz 2017). The paper examines that whether microfinance has been instrumental in promoting gender equality. The study focuses on three areas that success of microfinance in empowering women; effect of negative gender discrimination within sectors; power relations within and beyond household shapes the outcomes of microcredit. The study reveals the challenges ahead of the microfinance sector evolution and its initiatives to further gender equality.

(Palavi Rajput, Dr. Manvendra Singh 2022). According to their study SHGs have been critical in upliftment of women in Jammu, India. Study reveals the capabilities of women and how SHGs and

microcredit helped overcome financial difficulties and become socially and economically empowered. The study also highlights the importance of SHGs for the sustainable growth of women in Jammu.

(Lakhawat Saroj and Charan Shailendra Singh 2015). The study has been conducted in Ajmer district, Rajasthan, India covering four villages and two districts. The aim of the study is to assess the role of microcredit through SHGs in the socio-economic empowerment of women. Women have been facing exploitation in many forms and to get rid of these, how SHGs concept and mechanism is being instrumental.

(Chitagubbi Geeta, Shivalli Rajeshwari, Devendrappa S 2011). The present study was undertaken with the objectives of studying the socio- economic status of SHG members and to evaluate the social impact of membership of SHGs on the empowerment of women members in 4 districts of Karnataka namely Bider, Dharwad, Gadag and Raichur. The sample of the study was about 400 SHG members from above four villages. The study concluded that microfinance through SHGs have contributed in the economic, social, political and development of leadership qualities, which had led to the empowerment of women.

(Sibghatullah Nasir 2013). This paper studies the status of microfinance in India since its emergence. SHGs have emerged as the dominating prospect for the microfinance providing cost effective mechanism for providing financial services to poor. The paper focuses on the various issues or gaps faced by microfinance institutions pertaining to credit delivery such as lack of product diversification, less thrust on enterprise loans, collection of loans or savings, high interest rates etc. The paper suggests some measures to overcome the challenges in the microfinance sector of India.

RESEARCH METHODOLOGY

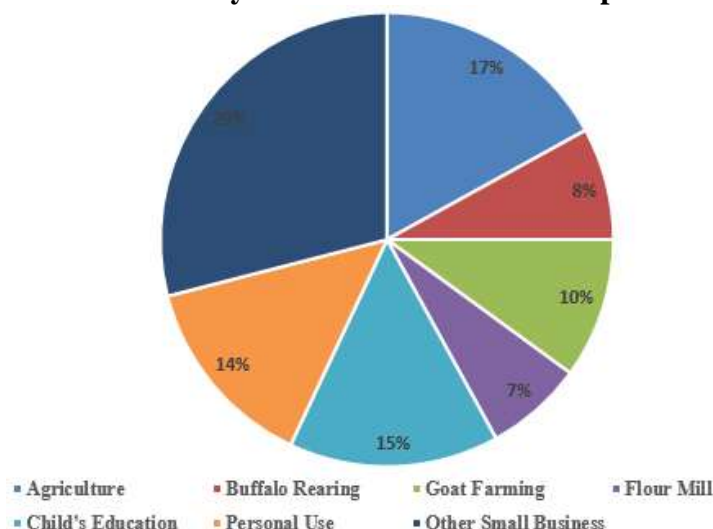

Major objectives of the research are:

1. To undertake a comparative analysis of the purpose of utilization of microfinance by SHGs of rural and urban areas
2. To examine the differences in the extent of entrepreneurial empowerment among rural and urban women SHG members
3. To examine the reasons underlying the entrepreneurial behavior among the women SHG members
4. To assess the impact of microfinance and SHG participation for overall empowerment

Sources of Data: The study is exploratory in nature and is based on both primary and secondary data. Secondary data was collected from various journals, articles, working papers, NGO reports etc. Primary data was collected by way of a structured questionnaire prepared regional language. Sample Size: Total respondents are 200 women out of whom, 100 members belonged to rural SHGs and the remaining 100 members are chosen from the Urban SHGs. Each SHG comprised of 10 members and hence 10 groups from rural and 10 groups from Urban region are selected for the study.

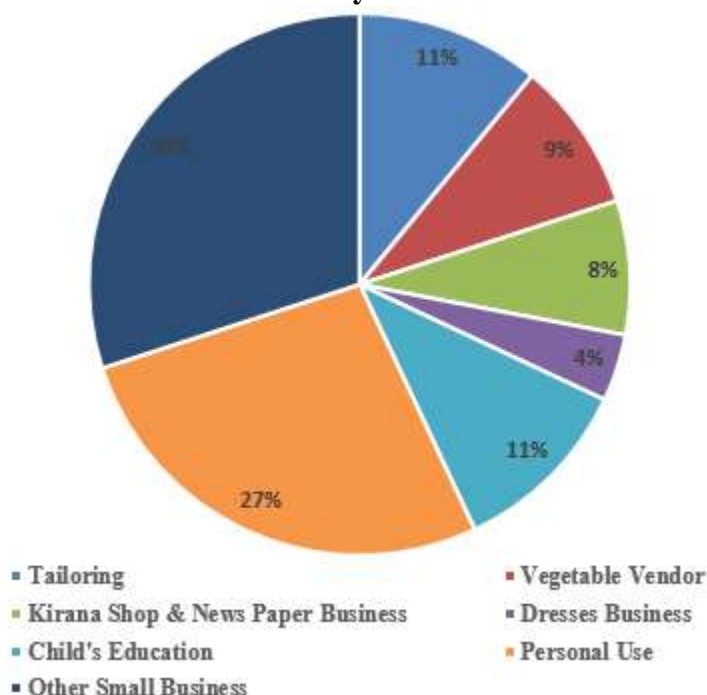

Method for data collection: A structured interview schedule was prepared and used for collecting data from the women SHG members. Both open ended and close ended questions were included in the schedule. Statistical tools: percentage analysis and rank correlation are used for the analysis of the data.

FIG-I: Purpose of Loan & Utilization by SHG Members in Rusthapur Village

From the Fig-I, it is observed that majority of women members (29%) have utilized the microfinance loans towards small and petty businesses, (17%) of the respondents have utilized for Agricultural production, (15%) towards children's education, (14%) made use for personal purposes, around (10%) used the loan amount for purchase of goats and goat farming, (7%) of women used the loan for setting up flour mills and (8%) of women have utilized the money for buffalo rearing.

Fig-II: Purpose of Loan & Utilization by SHG Members in LB Nagar (Urban)

From the Figure II, it is clear that the women SHG members belonging to Urban region, have utilized the microfinance for varied purposes, however, the common factor between the rural and urban SHG members is that the microfinance loans are not totally utilized for setting up businesses as intended but is utilized for various other personal uses. There is a difference between the rural and urban SHG members with respect to the types of small business started by them.

Table -I: Entrepreneurial Activity of SHG Members

Purpose of Loan from SHG	(Rural) Rustapur Village n(100)	%	Urban (LB Nagar) n(100)	%
Entrepreneurial Activity	71	71%	62	62%
Personal or Other Uses	29	29%	38	38%

The above table shows the number of women SHG members who have taken the microfinance loan for starting small businesses. It was observed that 71% of rural women SHG members were engaged in small businesses and showcased their entrepreneurial empowerment. As against the rural women, 62% of urban SHG members were engaged in small entrepreneurial activities.

Table -II: Rational behind Entrepreneurial Activity of Respondents

S. No.	Rationale	Rural (Rusthapur Village)			Urban(LB Nagar)			Rank Order Correla tion 'r'

**Significance at 5% level of Probability*

Table II shows the responses women which indicate the reasons for their entrepreneurial initiatives both in rural and urban regions and rank correlation is calculated. The research identified 32 factors which are categories into four segments such as 1) Economic reasons 2) Personal reasons 3) Social and cultural reasons and 4) supportive microfinance ecosystem. On the basis of rank correlation, it was observed that the major reasons expressed by the women SHG members was the economic rationale with r value of 0.9512 followed by personal reasons with r value equal to 0.9232, for social and cultural factors with r value equal to 0.866 and supportive microfinance ecosystem with an r value of 0.7238. The above data clearly indicates that majority of the women were motivated to start small businesses owing to economic reasons.

Table-III: Entrepreneurial Profile of SHG Members

S. No.	Entrepreneurial Factors	Rustapur Village		Urban		Total	
		n(71)	%	n(62)	%	n(183)	%
1	Willingness to Change						
	Low	26	37	24	39	50	38
	Moderate	15	21	12	19	27	20
	High	20	28	15	24	35	26
	Very High	10	14	11	18	21	16
2	Preparedness for Risk						
	Low	30	42	27	44	57	43

3	Moderate	16	23	12	19	28	21
	High	20	28	14	23	34	26
	Very High	5	7	9	15	14	11
Commitment							
4	Low	5	7	6	10	11	8
	Moderate	21	30	18	29	39	29
	High	25	35	18	29	43	32
	Very High	20	28	20	32	40	30
	Family Decision						
5	Self	10	14	25	40	35	26
	Husband	16	23	15	24	31	23
	Elderly Person	15	21	7	11	22	17
	Family Business	30	42	15	24	45	34
	Entrepreneurial Decision						
	Self	24	34	30	48	54	41
	Husband	37	52	17	27	54	41
	Self along with SHG members	10	14	15	24	25	19

Table III: The above table reveals the psychological factors influencing the women SHG entrepreneurs in both rural and urban regions. The research identified five psychological factors such as willingness to change, preparedness for risk, commitment, family decisions and entrepreneurial decisions that influenced women to become entrepreneurs or support their husbands in entrepreneurial activity. The first three responses were rated on a scale of 4 with 1 being low and 4 being very high. The above data indicates that out of 71 rural women who took to businesses, between 14% to 28% of rural women and between 18% to 24% urban women exhibited the willingness to change which is one of the prerequisites for entrepreneurship. Preparedness for risk was observed to be low both for rural women at 42% and 57%. Both rural and urban women exhibited moderate to high levels of much needed commitment to run their businesses. It was observed from the study that women from both urban and rural areas were significantly influenced by family decisions and their spouses.

Table IV: Categories of Empowerment

	Overall Empowerment								
5	Low	27	27	28	28	55	28		
	Moderate	30	30	25	25	55	27		
	High	29	29	30	30	59	30		
	Very High	14	14	18	18	32	16		

Table IV reveals the achievement of overall empowerment of the rural and urban women members of SHGs. It was clearly indicated that almost all the respondents belonging to rural and urban regions achieved certain levels of economic, social, political and entrepreneurial empowerment owing to their active participation in the SHG and availing microfinance for their progress. It was observed that economic empowerment was highest with Mean weighted score of 1.030 followed entrepreneurial empowerment with a mean weighted score of 1.024. social empowerment with a mean weighted score of 0.992 and Political empowerment with a mean score of 0.939. Study indicates that there has been an overall empowerment amongst all the women SHG members.

Findings from the Study:

The study aimed at examining the socio economic, political and entrepreneurial empowerment amongst the women members of SHGs from a rural and urban region. The researchers have observed few commonalities among both rural and urban women in terms of their entrepreneurial mindset, and empowerment. The responses received from the women members of SHG have reinstated the fact that the purpose for which SHGs were formed and giving them opportunities to explore small businesses by facilitating small loans through microfinancing mechanism, has transformed their lives through govt interventions and intended financial inclusion. Women are able to participate in financial decisions to a great extent and they have been pillars of support both to the spouses as well as their children. Urban SHG members are observed to be participating in diverse businesses though small such as vegetable vending, wet grinding units, clothing business and seen to have empowered themselves and the family.

Conclusions:

The study has revealed that microfinance has created a significant impact on the livelihoods of women both in rural and urban regions. Microfinance loans and its productive utilization is observed to be having a crucial role and impact on women empowerment. The research findings of the study suggest that microfinance has a profound influence on the economic profile, decision making ability, knowledge and self-worth of women members of SHGs in both the rural and urban regions.

Microfinance is accepted as an enabling tool for achieving and managing a sustained and long-term economic growth in all over the world. Reaching poor people on a large scale with customized financial products on a regular basis involves an engaging financial system where microfinance sector offers more

robust solutions in transforming the informal sector while ensuring access, affordability and continuity. Review of literature on microfinance has exposed the bottlenecks and challenges, it is by far considered as a tool for multidimensional empowerment of women.
